EDUCATION

The University of Texas at San Antonio
Bachelor of Science, Computer Science

May 2025

TECHNICAL SKILLS

- Programming: Java, C, HTML, CSS, JavaScript, Python
- Systems & Tools: MySQL, MySQL Workbench, NetSuite, AWS
- Data & Analysis: SQL, Trend Forecasting, Data-Driven Decision Making

RELEVANT EXPERIENCE

Extern | Amazon Fulfillment Center, Remote March 2026 – Present

- Analyzed unstructured employee feedback to identify workforce attraction risks, productivity blockers, and key operational pain points with Amazon Fulfillment Centers
- Created segmented cohort profiles using qualitative data analysis and thematic coding to surface role-specific challenges and recommend targeted interventions
- Developed business-ready briefing notes and strategy decks synthesizing frontline insights into actionable operational recommendations

Barista | Blank Street, New York, NY September 2025 – Present

- Worked in a high-volume store where accuracy, speed, and consistency were critical during peak hours
- Used NetSuite to receive and check in deliveries, making sure items matched purchase orders and reporting any issues
- Developed an understanding of how ordering decisions, delivery timing, and forecasting affect day-to-day store operations
- Worked closely with the team to keep the store running smoothly, especially when inventory or product availability changed

PROJECTS

Beauty Trend Intelligence Dashboard

Python, Tableau Public, Github

- Built an interactive Tableau dashboard analyzing beauty trend lifecycles across Google Trends search data, distinguishing short-cycle viral micro-trends from sustained macro-trends to simulate a campaign-ready brand intelligence report
- Engineered a Python data pipeline using Pandas to collect, clean, and structure weekly search data for 7 beauty trends across a 12-month period
- Designed 3 dashboard views — a trend lifecycle line chart, monthly heatmap, and ranked bar chart — enabling dynamic filtering by trend name and lifecycle status
- Used the model's findings to spot trends and anomalies

Archival Fashion Database

Database Systems Course

- Led the development of a concept MySQL database to catalog and preserve iconic and vintage fashion pieces
- Built a relational MySQL database to simulate a professional fashion archive, using structured data from sources like The Met and V&A Museum
- Created SQL queries to support business-relevant insights such as designer impact, collection timelines, and trend forecasting based on fabric, season, and style
- Defined business rules to ensure data integrity, user accessibility, search functionality, and copyright compliance

AWARDS

- **President's List**, Fall 2022, **Dean's List**, Fall 2024
- **Reboot Scholar**, Spring 2024 - Selected by the UTSA School of Data Science in partnership with Reboot Representation. Recognized for promoting innovation, leadership, and the advancement of underrepresented women in tech through academic and professional development.
